J. ELECTROCARDIOLOGY 20(5), 1987, 404–411

Subject Index Volume 20

A

Acidosis
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

Action potential duration
electrophysiologic properties differ in the ventricular endocardium and epicardium of the Japanese monkey, 3:185–192

Action potentials
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

Activation
mathematical modeling of electrical activity of the heart, 3:219–226

Alpha-1 receptor
effects of bunazosin and propranolol on ventricular arrhythmias, 2:147–153

Ambulatory electrocardiography
real-time analysis ambulatory electrocardiography—clinical evaluation of cardiac arrhythmias by the Aegis System, 3:247–254

Ambulatory electrocardiographic monitoring
termination of ventricular bigeminy by conversion to concealed forms, 2:110–113

Anatomical left ventricular hypertrophy
evaluation of electrocardiographic criteria for left ventricular hypertrophy based on anatomical comparison, 4:369–374

Animal experiments
relationship between reestablishment of sarcolemma-glycocalyx ultrastructures and restoration of transmembrane potentials in cultured rat heart cells, 4: 303–311

Array ECG signals
epicardial electrical activation analyzed via frequency-wavenumber spectrum estimation for the characterization of arrhythmiagenic states, 4:329–351

Arrhythmias
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

Arrhythmiagenic states
epicardial electrical activation analyzed via frequency-wavenumber spectrum estimation for the characterization of arrhythmiagenic states, 4:329–351

Atheletes
atrioventricular Wenckebach periodicity in athletes: influence of increased vagal tone on the occurrence of atypical periods, 3:272–279

Atrial injury
interatrial conduction and STa in experimental atrial damage, 4:357–363

Atrial pacing
the effects of cycle length on fragmented atrial activity zone in patients with sick sinus syndrome, 4:364–368

Atrial pacemakers
triggered rhythms in atrial muscle, 1:33–37

Atrial vulnerability
the effects of cycle length on fragmented atrial activity zone in patients with sick sinus syndrome, 4:364–368

Atrioventricular Wenckebach periodicity
atrioventricular Wenckebach periodicity in athletes: influence of increased vagal tone on the occurrence of atypical periods, 3:272–279

B

Body map
myocardial infarction size and location: a comparative study of epicardial isopotential mapping, Thallium-201 scintigraphy, electrocardiography and vectorcardiography, 3:203–211

Body surface isochrone map
temporal changes in body surface peak R isochrone maps and left ventricular function of patients with myocardial infarction, 3:212–218

Body surface potential mapping
using body surface mapping to detect vulnerability to ventricular arrhythmias in patients with coronary artery disease, 2:114–120

Bundle branch block
electrocardiographic diagnosis of left ventricular hypertrophy in the presence of left bundle branch block, 3:227–232
electrophysiological mechanisms of the S_I S_{II} S_{III} electrocardiographic morphology, 1:38–44

C

Calcium
effects of bunazosin and propranolol on ventricular arrhythmias, 2:147–153

Cardiac voltages
relationship between changes in R wave voltage and cardiac volumes. a vectorcardiographic study during hemodialysis, 2:138–146

Cardiac volumes
relationship between changes in R wave voltage and cardiac volumes. a vectorcardiographic study during hemodialysis, 2:138–146

Cellular electrophysiology
the cellular electropharmacology of the simultaneous administration of propranolol and mexiletine. a class I and II antiarrhythmic drug combination, 4:297–302

Central nervous system injury
the effects of elevated intracranial pressure on the canine electrocardiogram, 2:154–161

Chamber dissection technique
evaluation of electrocardiographic criteria for left ventricular hypertrophy based on anatomical comparison, 4:369–374

Chronic obstructive pulmonary disease
electrophysiological mechnisms of the S_I S_{II} S_{III} electrocardiographic morphology, 1:38–44

Computer
description and evaluation of a method for computer analysis of the exercise electrocardiogram, 4:312–320

Computer ECG systems
is a higher sampling rate desirable in the computer processing of the pediatric electrocardiogram? 4:321–328

Computerized ECG analysis programs, performance of
a technique to evaluate the performance of computerized ECG analysis systems, Supp.:68–72
development of a reference library for multi-lead ECG measurements programs, Supp.:56–61
implementation of the Louvain program for exercise ECG analysis on a microprocessor system, Supp.:140–144
stability of ECG amplitude measurements in systematic noise tests. results and recommendations from the CSE project, Supp.:61–67
testing the performance of ECG computer programs: the CSE diagnostic pilot study, Supp.:73–77
the effect of residual noise on the reproducibility of the signal-averaged electrocardiogram, Supp.:102
See also **Epidemiology and the computerized ECG**

Concealed
ectopics
progressively decreasing ectopic to second sinus beat intervals in concealed trigeminy: a case report, 3:284–286
extrasystoles
progressively decreasing ectopic to second sinus beat intervals in concealed trigeminy: a case report, 3:284–286
concealed ventricular quadrigeminy linked to atrial quadrigeminy: a manifestation of modulated parasystole, 2:162–168
trigeminy
progressively decreasing ectopic to second sinus beat intervals in concealed trigeminy: a case report, 3:284–286

Coronary angiography
ventricular fibrillation during coronary angiography: the precatheterization QT interval, 3:255–259

Coronary artery disease
R-wave amplitude changes during exercise stress testing: patients with dilative cardiomyopathy compared to patients with coronary artery disease, 3:260–271
using body surface mapping to detect vulnerability to ventricular arrhythmias in patients with coronary artery disease, 2:114–120

Cultured heart cells
relationship between reestablishment of sarcolemmaglycocalyx ultrastructures and restoration of transmembrane potentials in cultured rat heart cells, 4:303–311

Cushing response
the effects of elevated intracranial pressure on the canine electrocardiogram, 2:154–161

D

Data reduction
body surface maps and the conventional 12-lead ECG compared by studying their performances in classification of old myocardial infarction, 3:193–202

Diagnostic accuracy of computer ECG systems
is a higher sampling rate desirable in the computer processing of the pediatric electrocardiogram? 4:321–328

Dilative cardiomyopathy
R-wave amplitude changes during exercise stress testing: patients with dilative cardiomyopathy compared to patients with coronary artery disease, 3:260–271

Dipole theory
determination of cardiac equivalent generator properties using a numerical expansion method, 4:352–356

Dual A-V pathways
atrio-ventricular junctional parasystole: modulation by sinus impulses, 1:45–50

E

ECG changes
natural course of electrocardiographic components and stages in the first twelve hours of acute myocardial infarction, 2:90–109

ECG criteria for left ventricular hypertrophy
evaluation of electrocardiographic criteria for left ventricular hypertrophy based on anatomical comparison, 4:369–374

Echocardiography
relationship between changes in R wave voltage and cardiac volumes. A vectorcardiographic study during hemodialysis, 2:138–146

Electrical field theory
determination of cardiac equivalent generator properties using a numerical expansion method, 4:352–356

Electrocardiogram
classification methods
ordinal discrimination of ECG orthogonal features, Supp.:91–96
lack of superiority of the vectorcardiogram over the electrocardiogram in detecting inferior wall myocardial infarction regardless of time since infarction, 3:241–246
prominent anterior QRS forces: clinical, electrocardiographic and prospective study, 3:233–240
the effects of elevated intracranial pressure on the canine electrocardiogram, 2:154–161
the normal right chest electrocardiogram, 1:27–32

Electrocardiography
body surface maps and the conventional 12-lead ECG compared by studying their performances in classification of old myocardial infarction, 3:193–202
description and evaluation of a method for computer analysis of the exercise electrocardiogram, 4:312–320
electrophysiological mechanisms of the S_I S_{II} $S_{.II}$ electrocardiographic morphology, 1:38–44
fine detail in body surface potential maps: accuracy of maps using a limited lead array and spatial and temporal data representation, 1:1–20

Electrophysiology
fine detail in body surface potential maps: accuracy of maps using a limited lead array and spatial and temporal data representation, 1:1–20

Endocardium and epicardium
electrophysiologic properties differ in the ventricular endocardium and epicardium of the Japanese monkey, 3:185–192

Entrainment
two different patterns of entrainment of ventricular tachycardia, 1:55–64

Entrance block failure
atrio-ventricular junctional parasystole: modulation by sinus impulses, 1:45–50

Epicardial mapping
myocardial infarction size and location: a comparative study of epicardial isopotential mapping, Thallium-201 scintigraphy, electrocardiography and vectorcardiography, 3:203–211

Epidemiology and the computerized ECG
an optimal statistical decision model for diagnosis of coronary artery disease, Supp.:107
automated serial ECG-analysis within an epidemiological study, Supp.:34–36
British regional heart study: the electrocardiogram and risk of myocardial infarction on follow-up, Supp.: 53–56
electrocardiographic changes with advancing age. a cross-sectional study of the association of age with QRS axis, duration and voltage, Supp.:44–47
exercise-enhanced assessment of risk factors for coronary heart disease in healthy men, Supp.:162–166
the emerging prominence of computer electrocardiography in large population-based surveys, Supp.: 48–52
See also **Computerized ECG analysis programs, performance of**

Epinephrine
asystole with syncope following strenuous exercise in a man without organic heart disease: a case report, 3:280–283
effects of bunazosin and propranolol on ventricular arrhythmias, 2:147–153

Equipotential contour maps
body surface maps in left bundle branch block uncomplicated or complicated by myocardial infarction, left ventricular hypertrophy or myocardial ischemia, 1: 1–21

Equivalent cardiac generator
determination of cardiac equivalent generator properties using a numerical expansion method, 4:352–356

Errata
effect of the heart-lung boundary on the magnetocardiogram (article published in 19:1, 23–32), 1:80
relationship between changes in R wave voltage and cardiac volumes. A vectorcardiographic study during hemodialysis (20:2, pp. 138–146), 4:396

Esophageal
cineradiogram
a case of swallow syncope induced by vagotonic visceral reflex resulting in atrioventricular node suppression, 1:65–69
spasm
a case of swallow syncope induced by vagotonic visceral reflex resulting in atrioventricular node suppression, 1:65–69

Exercise stress testing
R-wave amplitude changes during exercise stress testing: patients with dilative cardiomyopathy compared to patients with coronary artery disease, 3:260–271

Exercise testing
how many electrocardiographic leads are required for exercise treadmill tests? 2:131–137

Exit block
non-sustained ventricular tachycardia with Wenckebach exit block, 1:51–54

F

Focal mechanism
non-sustained ventricular tachycardia with Wenckebach exit block, 1:51–54

Fragmented atrial activity zone
the effects of cycle length on fragmented atrial activity zone in patients with sick sinus syndrome, 4:364–368

Frequency-wavenumber spectrum estimation (FESE)
epicardial electrical activation analyzed via frequency-wavenumber spectrum estimation for the characterization of arrhythmiagenic states, 4:329–351

G

Glycocalyx
relationship between reestablishment of sarcolemma-glycocalyx ultrastructures and restoration of transmembrane potentials in cultured rat heart cells, 4: 303–311

Guinea pig papillary muscle
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

H

Heart conduction defects
body surface maps in left bundle branch block uncomplicated or complicated by myocardial infarction, left ventricular hypertrophy or myocardial ischemia, 1: 1–21

Hemodialysis
relationship between changes in R wave voltage and cardiac volumes. a vectorcardiographic study during hemodialysis, 2:138–146

Higher frequency components of ECG
is a higher sampling rate desirable in the computer processing of the pediatric electrocardiogram? 4:321–328

Huygen's method
mathematical modeling of electrical activity of the heart, 3:219–226

I

Increased vagal tone
atrioventricular Wenckebach periodicity in athletes: influence of increased vagal tone on the occurrence of atypical periods, 3:272–279

Inferior myocardial infarction
lack of superiority of the vectorcardiogram over the electrocardiogram in detecting inferior wall myocardial infarction regardless of time since infarction, 3: 241–246

Infra His'ian block
tachycardia-dependent second degree AV-block in a patient with right bundle branch block, 2:169–175

Interatrial block
interatrial conduction and STa in experimental atrial damage, 4:357–363

Interventricular conduction
electrocardiographically discrete right and left ventricular QRS complexes: a case report, 2:162–168

Intraatrial reentry
periodic occurrence of premature atrial beats inducing alternation during supraventricular tachycardia in a case of pre-excitation syndrome, 4:391–396

Intracranial hypertenison
the effects of elevated intracranial pressure on the canine electrocardiogram, 2:154–161

Intraventricular conduction disturbances
prominent anterior QRS forces: clinical, electrocardiographic and prospective study, 3:233–240

Ischemia
atrial pacing-induced, and the ECG
computer processing of the electrocardiogram during transesophageal atrial pacing-induced stress, Supp.: 106–107
early experience with esophageal pill electrode atrial pacing in the diagnosis of coronary artery disease—a trend toward improved specificity compared to treadmill exercise, Supp.:157–162
balloon-occlusion induced, and the ECG
quantitation of ischemia during total coronary occlusion with computer assisted high resolution ST segment monitoring: effect of collateral flow, Supp.: 104–106
exercise- (stress-) induced, and the ECG
computer-processing of the electrocardiogram during transesophageal atrial pacing-induced stress, Supp.:106–107
detection and measurement of the P-wave and T-wave during exercise testing using combined heuristic and statistical methods, Supp.:145–156
diagnostic value of the maximal ST-segment/heart rate slope in asymptomatic factory populations, Supp.:128–134
early experience with esophageal pill electrode atrial pacing in the diagnosis of coronary artery disease—a trend toward improved specificity compared to treadmill exercise, Supp.:157–162
exercise-enhanced assessment of risk factors for coronary heart disease in healthy men, Supp.:162–166
fine grid computer simulations of QRS-T and criteria for the quantitation of regional ischemia, Supp.: 1–8
implementation of the Louvain program for exercise ECG analysis on a microprocessor system, Supp.: 140–144

relation of the exercise ST/HR slope in asymptomatic factory populations, Supp.:128–134
unusual prognostic significance of exercise-induced ST elevation in coronary patients, Supp.:84–88
resting or silent, and the ECG
computer-assisted St-segment monitoring: experience during and after brief coronary occlusion, Supp.:15–21
development of a template boundary algorithm to determine the ST-T threshold for silent ischemia, Supp.:8–12
evaluation of a Holter system to record ST-segment changes, Supp.:12–15
fine grid computer simulations of QRS-T and criteria for the quantitation of regional ischemia, Supp.: 1–8
international society for computerized electrocardiography: background, purpose and progress report 1987, Supp.:21–25

Ischemic heart disease
description and evaluation of a method for computer analysis of the exercise electrocardiograam, 4:312–320

L

L-propionylcarnitine
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

Late potentials, ECG and
critical overview of late potential recordings, Supp.:125–127
signal processing options for detecting conduction abnormalities in ischemic ventricules, Supp.:119–124
the spatial distribution of late ventricular potentials, Supp.:114–118

Leads, number of
how many electrocardiographic leads are required for exercise treadmill tests? 2:131–137

Left bundle branch block
electrocardiographically discrete right and left ventricular QRS complexes: a case report, 2:162–168

Left ventricular ejection fraction
temporal changes in body surface peak R isochrone maps and left ventricular function of patients with myocardial infarction, 3:212–218

Left ventricular hypertrophy
and the ECG
reevaluation of the VCG and ECG criteria for left ventricular enlargement, Supp.:89–91
electrocardiographic diagnosis of left ventricular hypertrophy in the presence of left bundle branch block, 3:227–232
evaluation of electrocardiographic criteria for left ventricular hypertrophy based on anatomical comparison, 4:369–374

Linear discriminant analysis
comparison of multigroup logistic and linear discriminant ECG and VCG classification, 2:83–92
body surface maps and the conventional 12-lead ECG compared by studying their performances in classification of old myocardial infarction, 3:193–202

Logistic discriminant analysis
comparison of multigroup logistic and linear discriminant ECG and VCG classification, 2:83–92

Low-potassium-induced arrhythmias
effects of bunazosin and propranolol on ventricular arrhythmias, 2:147–153

M

Map processing
fine detail in body surface potential maps: accuracy of maps using a limited lead array and spatial and temporal data representation, 1:1–20

Mexiletine
the cellular electropharmacology of the simultaneous administration of propranolol and mexiletine. a class I and II antiarrhythmic drug combination, 4:297–302

MI size
enhancement of an old diagnostic tool, the standard 12-lead ECG 2:93–97

Model
mathematical modeling of electrical activity of the heart, 3:219–226

Multi-lead system
body surface maps in left bundle branch block uncomplicated or complicated by myocardial infarction, left ventricular hypertrophy or myocardial ischemia, 1: 1–21

Myocardial imaging
electrophysiological mechanisms of the S_I S_{II} S_{III} electrocardiographic morphology, 1:38–44

Myocardial infarction
diagnosis of and the ECG
estimation of myocardial infarct size by electrocardiographic and radionuclide techniques, Supp.: 78–81
monitoring of infarct size and infarct evolution by serial analysis of QRS vector differences, Supp.: 81–83
myocardial infarction size and location: a comparative study of epicardial isopotential mapping, Thallium-201 scintigraphy; electrocardiography and vectorcardiography, 3:203–211
temporal changes in body surface peak R isochrone maps and left ventricular function of patients with myocardial infarction, 3:212–218

Myocardial infarction, acute
natural course of electrocardiographic components and stages in the first twelve hours of acute myocardial infarction, 2:90–109

Myocardial ischemia
epicardial electrical activation analyzed via frequency-wavenumber spectrum estimation for the characterization of arrhythmiagenic states, 4:329–335

N

Na, K-pump activity
electrophysiologic properties differ in the ventricular endocardium and epicardium of the Japanese monkey, 3:185–192

Normal values
the normal right chest electrocardiogram, 1:27–32

Numerical expansion techniques
determination of cardiac equivalent generator properties using a numerical expansion method, 4:352–356

O

Ouabain
electrophysiologic properties differ in the ventricular endocardium and epicardium of the Japanese monkey, 3:185–192

P

Pacemaker shifts
triggered rhythms in atrial muscle, 1:33–37

Pacemaker signals, and computer-processed ECG
a computerized system for modeling pacemaker rhythms, Supp.:28–33
expert systems implanted for pacemaker analysis, Supp.: 26–28

Parasympathetic nerve
asystole with syncope following strenous exercise in a man without organic heart disease: a case report, 3: 280–283

Parasystole
concealed ventricular quadrigeminy linked to atrial quadrigeminy: a manifestation of modulated parasystole, 2:162–168

Parasystolic modulation
concealed ventricular quadrigeminy linked to atrial quadrigeminy: a manifestation of modulated parasystole, 2:162–168

Period of susceptibility
atrio-ventricular junctional parasystole: modulation by sinus impulses, 1:45–50

Phase-response curve
concealed ventricular quadrigeminy linked to atrial quadrigeminy: a manifestation of modulated parasystole, 2:162–168

PR prolongation
atrioventricular Wenckebach periodicity in athletes: influence of increased vagal tone on the occurrence of atypical periods, 3:272–279

Propagation
mathematical modeling of electrical activity of the heart, 3:219–226

Propranolol
the cellular electropharmacology of the simultaneous administration of propranolol and mexiletine. a class I and II antiarrhythmic drug combination, 4:297–302

Purkinje fiber
the cellular electropharmacology of the simultaneous administration of propranolol and mexiletine. a class I and II antiarrhythmic drug combination, 4:297–302

Q

QRS anterior displacement
prominent anterior QRS forces: clinical, electrocardiographic and prospective study, 3:233–240

QT interval
ventricular fibrillation during coronary angiography: the precatheterization QT interval, 3:255–259

R

R wave
relationship between changes in R wave voltage and cardiac volumes. a vectorcardiographic study during hemodialysis, 2:138–146

R-wave amplitude changes
R-wave amplitude changes during exercise stress testing: patients with dilative cardiomyopathy compared to patients with coronary artery disease, 3:260–271

Radionuclide ventriculography
temporal changes in body surface peak R isochrone maps and left ventricular function of patients with myocardial infarction, 3:212–218

Real-time analysis
real-time analysis ambulatory electrocardiography—clinical evaluation of cardiac arrhythmias by the Aegis System, 3:247–254

Real-time analysis ambulatory ECG
real-time analysis ambulatory electrocardiography—clinical evaluation of cardiac arrhythmias by the Aegis System, 3:247–254

Reentry
atrioventricular Wenckebach periodicity in athletes: influence of increased vagal tone on the occurrence of atypical periods, 3:272–279

Refractory period
differential effect of L-propionylcarnitine on the electrical and mechanical properties of guinea pig ventricular muscle in normal and acidic conditions, 4: 287–296

Resting potential
electrophysiologic properties differ in the ventricular endocardium and epicardium of the Japanese monkey, 3:185–192

Right chest
the normal right chest electrocardiogram, 1:27–32

Right ventricular enlargement
electrophysiological mechanisms of the $S_I S_{II} S_{III}$ electrocardiographic morphology, 1:38–44

S

Sarcolemma
relationship between reestablishment of sarcolemma-glycocalyx ultrastructures and restoration of transmembrane potentials in cultured rat heart cells, 4: 303–311

Selvester QRS scoring system
enhancement of an old diagnostic tool, the standard 12-lead ECG 2:93–97.

Sick sinus syndrome
the effects of cycle length on fragmented atrial activity zone in patients with sick sinus syndrome, 4:364–368

Signal processing of the ECG and noise reduction
a computerized system for modeling pacemaker rhythms, Supp.:28–33
adaptive filtering in noninvasive ECG monitoring of the fetal heart rate, Supp.:108–113
critical overview of the late potential recordings, Supp.: 125–127
expert systems implanted for pacemaker analysis, Supp.: 26–28
signal processing options for detecting conduction abnormalities in ischemic ventricles, Supp.:119–124
the effect of residual noise on the reproducibility of the signal-averaged electrocardiogram, Supp.:102
the spatial distribution of late ventricular potentials, Supp.:114–118

Simulation model
vectorcardiographic QRS loop in spontaneous pneumothorax, 4:375–382

Simulation
mathematical modeling of electrical activity of the heart, 3:219–226

Spatial-velocity electrocardiogram
electrophysiological mechanisms of the $S_I S_{II} S_{III}$ electrocardiographic morphology, 1:38–44

Spontaneous pneumothorax
vectorcardiographic QRS loop in spontaneous pneumothorax, 4:375–382

ST segment changes
how many electrocardiographic leads are required for exercise treadmill tests? 2:131–137
natural course of electrocardiographic components and stages in the first twelve hours of acute myocardial infarction, 2:90–109

STa
interatrial conduction and STa in experimental atrial damage, 4:357–363

Stepwise discriminant analysis
body surface maps in left bundle branch block uncomplicated or complicated by myocardial infarction, left ventricular hypertrophy or myocardial ischemia, 1: 1–21

Stress test
description and evaluation of a method for computer analysis of the exercise electrocardiogram, 4:312–320

Stress testing
transient "pathological" Q-waves occurring during exercise testing: assessment of their clinical significance in a presentation of a series of patients, 2:121–130

Supernormal excitability and conductivity in the His bundle
atrio-ventricular junctional parasystole: modulation by sinus impulses, 1:45–50

Sympathetic nerve
asystole with syncope following strenuous exercise in a man without organic heart disease: a case report, 3:280–283

T

Tachycardia-dependent AV block
tachycardia-dependent second degree AV-block in a patient with right bundle branch block, 2:169–175

Transmembrane potential
relationship between reestablishment of sarcolemma-glycocalyx ultrastructures and restoration of transmembrane potentials in cultured rat heart cells, 4: 303–311

Triggered activity
triggered rhythms in atrial muscle, 1:33–37

Triggered automaticity
periodic occurrence of premature atrial beats inducing alternation during supraventricular tachycardia in a case of pre-excitation syndrome, 4:391–396

Two-dimensional electrical field
vectorcardiographic QRS loop in spontaneous pneumothorax, 4:375–382

V

Vagovagal reflex
a case of swallow syncope induced by vagotonic visceral reflex resulting in atrioventricular node suppression, 1:65–69

Valsalva's maneuver
asystole with syncope following strenuous exercise in a man without organic heart disease: a case report, 3:280–283

Vectorcardiogram
lack of superiority of the vectorcardiogram over the electrocardiogram in detecting inferior wall myocardial infarction regardless of time since infarction, 3:241–246
vector U loop in patients with right ventricular overloading, 4:383–390
vectorcardiographic QRS loop in spontaneous pneumothorax, 4:375–382

Vectorcardiography
relationship between changes in R wave voltage and cardiac volumes. A vectorcardiographic study during hemodialysis, 2:138–146

Ventricular
arrhythmia
termination of ventricular bigeminy by conversion to concealed forms, 2:110–113
arrhythmias
an atrial extrastimulus technique for separating sinus tachycardia from pace-terminable 1:1 tachycardias for use in an antitachycardia pacemaker, Supp.:103
non-sustained ventricular tachycardia with Wenckebach exit block, 1:51–54
prediction of ventricular arrhythmias from ECG waveforms, Supp.:97–101
asynchrony
electrocardiographically discrete right and left ventricular QRS complexes: a case report, 2:162–168
bigeminy
termination of ventricular bigeminy by conversion to concealed forms, 2:110–113
fibrillation
ventricular fibrillation during coronary angiography: the precatheterization QT interval, 3:255–259
pacing
electrocardiographically discrete right and left ventricular QRS complexes: a case report, 2:162–168
tachycardia
two different patterns of entrainment of ventricular tachycardia, 1:55–64

Vulnerability map
using body surface mapping to detect vulnerability to ventricular arrhythmias in patients with coronary artery disease, 2:114–120

Wolff-Parkinson-White syndrome
periodic occurrence of premature atrial beats inducing alternation during supraventricular tachycardia in a case of pre-excitation syndrome, 4:391–396

Proceedings of the
Engineering Foundation Conference

COMPUTERIZED INTERPRETATION OF THE ELECTROCARDIOGRAM XII

April 5–10, 1987

Conference Chairman: W. Kenneth Haisty, Jr., M.D.
Co-Chairman: Edward J. Berbari, Ph.D.

Guest Editors: James J. Bailey, M.D. and Paul Kligfield, M.D.

I. The Computerized ECG in Acute Intervention and Silent Ischemia
Chairman: *James Pope* 1

II. Pacemaker Electrocardiography: Can It Be Computerized?
Chairman: *Kenneth Haisty* 26

III. The Computer Analyzed ECG in Epidemiology and Clinical Trials
Chairman: *James Bailey* 34

IV. International Standards for Performance of ECG Programs
Chairman: *Jos Willems* 56

V. The Diagnosis of Myocardial Infarction: Recent Advances
Chairman: *Marie Cowan* 78

VI. New Approaches to ECG Classification and Diagnosis
Chairman: *Marie Cowan* 91

Plenary Speaker: Dr. J. A. Abildskov
Prediction of Ventricular Arrhythmias from ECG Waveforms 102

VII. Young Investigators Competition
Chairman: *Benjamin J. Scherlag* 108

VIII. High Resolution Electrocardiography: Recent Advances
Chairman: *Seth Worley* 128

IX. Exercise Electrocardiography: Recent Advances
Chairman: *L. Thomas Sheffield* 162
